

ANPR

license plate recognition

vehicle
identification

How it works

License plate recognition

Meet ANPR

Nedap's ANPR platform offers long-range identification by capturing a vehicle's license plate up to distances of 2 (6.5 ft.) - 10 meters (33 ft.). Nedap's license plate cameras are easy to integrate with existing access control systems through Wiegand communication.

Where applied

ANPR is specifically designed for vehicle access applications where RFID tags cannot be issued. It is ideal for city and parking access as well as for traffic management. ANPR is the perfect solution for applications where vehicles need to be granted access temporarily or incidentally.

Applications

Baltic borders

Reducing queues at borders of Estonia, Lithuania and Russia.

Vodafone Village, Italy

Employees and visitors enjoy comfortable access to the parking facility.

Benefits

all-in-one solution for automatic license plate reading

wiegand output

european libraries on board

worldwide country libraries available

seamless and flexible integration into third party systems

Products

ANPR Lumo

The ANPR Lumo is an all-in-one license plate camera. With a range of action of 2 to 10 meters (6.5 to 33 feet), the advanced camera ensures a smooth recognition of vehicles. The user-friendly web interface enables easy systems configuration and offers built-in vehicle access control features. Typical applications include barrier-controlled and free-flow applications. Deep learning algorithms enable a high accuracy in both regions with common license plate formats, like Europe, and non-standardized license plate formats, such as the USA and Pacific region.
